dental instruments in Scandinavia

Introducing

IDX Plus

16 years of excellence

New edition - MA Dental is glad to provide you with the most up-to-date edition of our dental instrument catalog. It comprises our entire line of dental and surgical instruments, as well as our InstruDents ergonomic silicone line (IDX). Our newest collection of IDX Plus is also a part of this catalog.

We are constantly expanding our product line with new and innovative products. Please visit our website at www.madental.dk for the most up-to-date product information.

Profile - MA Dental is a danish company (formerly MA Medicals), established by a Danish sport surgeon in 2007. We specialize in designing & developing premium-quality dental instruments with the singular aim of providing innovative, quality instruments to dental professionals all around the world. Our primary focus is to keep quality high and prices low to enable dental clinics to always purchase quality instruments without the constant worry of high cost.

Quality & Guarantee:- All MA Dental instruments are manufactured under strict quality control conditions, and all are made with premium-grade stainless steel. The instruments go through a unique process of passivation which ensures a strong resistance against rust and extends further their long-life and durability. We guarantee your full satisfaction and take responsibility for any manufacturing defects, no matter how unusual or unlikely. Visit our website at www.madental.dk to learn more about our quality and guarantee.

What our **customers** say about us

Dr Anil Shrestha

BDS, BSc(Hons), DGD(P)(UK), MGDS
RCS(Eng), MSc(Lond), MFDS RCSEd.,
MFDS RCPS(Glas), FFGDP RCS(Eng),
FICD., Clinical Director / Registered
Specialist in Prosthodontics - Wimpole
Street, London W1G

"Having only ever used premium surgical instruments for the past 20 years, I have very discerning and exacting requirements of my hand instruments to enable me to produce the consistently high quality of work required in private specialist practice. The selection of restorative instruments from INSTRUMENTS IDX complement my usual instruments perfectly; they are in many ways a natural evolution of instrument design, incorporating the comfort of modern silicone handles, near-perfect balance-points, exceptionally comfortable ergonomic design, and quality working tips. The clear and legible labelling on the instrument handles and the distinctive colour coding make the identification and selection of these instruments almost intuitive, a pleasant bonus that my dental nurses really appreciate. My hygienists love these instruments for their daily work too and I look forward to seeing the range of instruments broaden in the future."

Dr Maria Kocisova MDDr

Associate Dentist | London, UK

"As a cosmetic dentist I do many composite restorations on a daily basis. I enjoy using the IDX composite modelling instruments as they offer excellent non-stick properties that add efficiency to my clinical procedures. These ergonomic instruments have tools on each end, designed to carry the composite resin to the prep, packing it into place and smoothing out the surface. The plugger end is designed to help avoid composite pullback. All are fully autoclavable."

"The ergonomic handle rests easily, naturally and comfortably in my grasp. The textured handle surface provides better traction and stability"

Sonja Novovic

Clinic Manager | Falkonertandlægerne | Denmark.

"For the past six years, I've been purchasing MA Dental instruments. I've used a number of their instruments, but my favorites are their surgical instruments, Manage cassettes, and 1 mm probes. Their instruments are of outstanding quality and are extremely helpful during our hectic clinic days."

"MA Dental is very flexible in how they work, and they are a great help when I need some particular instrument. It has always been a pleasure working with MA Dental."

Zoya El-Niggar

Glentevej-Tandklinik | Køge, Denmark

"For quite some time, I've been using MA Dental's instruments. I recently had the opportunity to try out their latest IDX instruments. The instrument has an exquisite build and an ergonomic tail. Even if I use them for the whole day, they provide me with a great deal of ease."

"Our dental kits are simple to handle because of the color range available in Manage cassettes, and they also leave a good impact on our patients. These dental instruments are highly recommended by me."

Premium Instrument

There are two types of titanium oxide coated instruments available. (1) Fully titanium coated (2) Only the handle is titanium coated. Titanium coating is a highly scratch resistant material applied on the instrument and has a long working life as compared to non-coated instruments. It has several benefits such as: Its hygiene friendly, easy to clean, non-stick & sharpen free instrument (only fully titanium coated)

Re-Sharpenable working end

Sharp Instruments

Sharper - Harder - Durable

Sharp instruments are available with two handle options. One is in a premium handle (black titanium coated). The second option is the IDX ergonomic silicone handle. Sharp instruments are manufactured with premium quality sharp Swiss steel. Most dental instruments have an HRC rating of 51-53. HRC is the recognized industry rating that defines the sharpness of an instrument. Due to our unique heat treatment, the IDX Sharp has achieved a robust 60 HRC ensuring a supreme sharpness longevity.

All of our sharp instruments are non-stick & completely sharpen-free. Sharp instruments have supreme wear resistance and durability and maintain a long-lasting sharpness. Special black titanium oxide coating on the instruments ensures that they are easy to clean, hygiene friendly and give minimal reflection while being used.

Features!

- Sharpen free & non-stick
- Supreme wear resistant
- Durable & long lasting sharpness
- Easy to clean & hygiene friendly
- Minimal reflection

Gracey Curettes

Scaling and root planing are commonly performed with Gracey curettes. Since the instrument's configuration allows for better adaptation to the anatomy of the roots, these curettes are particularly useful for removing subgingival calculus.

Gracey curettes types

Mini

Ideal for scaling
deep, narrow pockets

**Blade shank 50% less
& 10% thinner**

Standard

Ideal for removing
subgingival calculus.

Rigid

Ideal for more
pressure to be applied .

**Thicker, rigid & wider
working-end than
standard Gracey**

Mini Gracey curettes

Mini Gracey curettes have a 3mm longer terminal shank than normal Gracey curettes. The blade shank of the mini Gracey curette is 50% shorter and 10% thinner than that of the regular Gracey curette. Scaling deep, narrow pockets with mini Gracey curettes is a smart idea.

Dr. Ammad Jawed.
MCLINDENT(TRAINEE).
NHS, Cardiff, UK.

As an endodontic trainee I spend long hours holding instruments. The IDX instruments are designed ergonomically and I found them very comfortable to use. All the instruments have textured grips so they don't slip easily and provide better handling. The spoon excavator reaches the deeper parts of the cavity and provides more control in removing caries/debris. The non-stick properties of composite modelling instrument saves a lot of time and effort. These instruments come in different colours which makes it very easy to differentiate in the cassette tray and it reduces the overall working time. The cassette has two locking ends which secures the instruments in place and is fully autoclavable. In a nutshell, I had a very pleasant experience with these instruments and I would definitely recommend them to others.

The softness, ergonomic grip, and fantastic color selection of the mirror handles are all things I admire. These IDX instruments are extremely comfortable to hold, do not slip, and have very professional and high-quality working points. They have the same feel as any other high-end instrument I've used in the past.

Dr. Ivana Vrbic,
Zagreb, Croatia

My first introduction with MA Dental was while using their IDX ergonomic instruments for composite modelling. They were very comfortable with non-stick properties which helped a lot during procedures. After a while I decided to get their surgical instruments from which I would single out La Grange black scissors and Barraquer gingiva as very precise and durable surgical tool.

X tool luxating elevators

Make your tooth extraction hassle free

246

The X tool luxating elevators are perfect for a painless tooth extraction. The working points of X tool luxating elevators are titanium oxide coated and made of solid stainless steel. In contrast to standard elevators, non-stick titanium oxide coating provides minimal reflection during surgery, is hygiene friendly, and has a long working life. Stainless steel is used in the construction of Xtool instruments.

The 7-piece X tool luxating kit comes in a sterilization cassette and is an all-in-one tooth extraction solution that saves time and cost.

Black scissors, Non-stick

MA Dental's black scissors are coated with a special titanium oxide material that keeps the scissor sharp for a long time and provides minimal reflection during surgery. Because of its nonstick properties, it is also easy to clean and very hygienic. These scissors are ideal for use during surgical procedures.

Dr. Matini Seresht

Børkop tandlægerene |
Børkop, Denmark

I've been using MA Dental instruments for the past 6 years and have been very pleased with the quality and variety of instruments available. MA Dental instruments are extremely comfortable in the hands, almost as if they were an extension of the surgeon's hands. They are ideal tools for me. That is why I strongly recommend that others use these dental instruments.

Dr. Cristian Dunker,

BDS, MBA | Gold coast, Australia.

"I'd like to share my experience with the MA Dental and IDX instruments. My experience with MA Dental's instruments has been extremely positive. We have complete cassette systems, as well as various kits for restorations, diagnostics, and surgery. I haven't noticed any issues with the IDX instruments or any rust on them. I am extremely pleased and intend to purchase additional instruments. Thank you, MA Dental, for the excellent quality you provide."

All round surgery kit

This surgery kit is an all round kit which covers most of the instruments required under regular dental surgeries. The surgery kit comes with a sterilisation tray.

15 instruments + 1 sterilisation cassette

- 2271-1 - College tweezer, 15cm
- 2275 - Adson surgery tweezer (1x2), 12cm
- 1613 - Sterilization cassette for 20 instrument with removable top
- 3025-cb - Gold-man fox black scissor Curved 13cm - TC
- 1079 - Root tip elevators 1.8mm, titanium coated instrument
- 2471 - Langenbeck retractor, medium size 42x10mm (21cm)
- 1209 - Filling remover (8mm handle)
- 1062 - Molt 5mm/8mm, periosteal elevator
- 1178-5 - Probe CP-12, 3-6-9-12mm / Explorer 23 (Hollow handle Ø10mm)
- 1076 - Universal curette M23, titanium coated instrument
- 2611 - Crile wood needle holder, 15cm - TC
- 2615-1 - Classic pean, curved, 13cm
- 1028 - Scalpel handle
- 1034 - Mirror handle, titanium coated, hollow-8mm
- 1001F - Rhodium/Front Surface Mirror Ø22mm - no. 4
- 1061-85 - Lucas 85

"In collaboration with MA Dental we managed to assemble a surgical kit that meets the need of any operatory dedicated to oral, implant or perio surgery. Durable - light - versatile. "

Manage Cassettes

Manage cassettes are made of durable plastic to ensure that instruments are handled safely and efficiently. Cassettes are available in two different sizes and four different colors. The use of different colors makes it simple and convenient to manage dental instruments. The cassettes are light and strong, making them long-lasting. The cassette's ergonomic design makes it easy to use during and after dental procedures. Injury risk is reduced thanks to the top and bottom layers of safety protection. The cassettes' unique design allows for free rotation of the instruments during the autoclave, allowing for thorough cleaning and rinsing of the dental instruments.

DENTIST REVIEWS & FEEDBACK

Manage cassettes are of high quality, they look solid & stable. I have sterilized them with & without sterilization bag and they work very well. I really like the different colors which these trays comes in and their practical sizes for regular dental procedures. The various colors helps identify and manage the different procedural trays easily, like regular diagnostic or filling treatments".

Sterilizations Cassettes

Stainless Steel Sterilization Cassettes

Stainless steel cassettes are rust-free. The detachable-lid design allows for better instrument visibility, as well as saving space within the cassette, easy handling, and open/close functionality. Fully autoclavable and capable of disinfection as well as sterilization in a single cassette. Our trays are available in three different colors for easy identification: red, blue, and green.

Features

Detachable lid & anti rust

Easy access, space saving & quick handling

Disinfection in a single tray and sterilization

Great visibility of the instruments

Reduced risk of injury & procedure time

Adjustable silicone

Maintenance

Instructions for cleaning & sterilization of dental instruments

MA Dental has prepared an instruction guide of how to clean & sterilize dental instruments step by step. The process is divided in different steps and the details of each one are described below:

Inspection

While the instrument blades and handles are still soft, make sure to remove any residue. Avoid using a metal brush. A metal brush will leave scratches or scrapes on the instrument surface, allowing residue to attach to other areas of your instruments. Because this is normally difficult to avoid, be mindful that if it is not removed during sterilization, it may bake onto the handle, producing discoloration if not removed.

NOTE: To avoid damaging the coating and thereby shortening the product's lifetime, do not use any abrasive equipment to remove residue from IDX Sharp or non-stick instruments.

DISINFECTION

Do not leave used instruments to sit in water or air. Immediately proceed to wash with your disinfectant of choice for dental hand instruments. Do NOT use liquids that contain chlorine, phenol or amines. Change the disinfectant regularly according to the instructions.

RINSING

The instruments must be washed thoroughly under running, lukewarm water immediately after disinfection.

CLEANING

The cleaning of dental instruments and materials is nothing more than the removal of the dirt, reducing the microbial charge, the organic matter and other contaminants; assuring the maintenance of the instrument's lifespan.

The cleaning can happen through two kinds of procedures:

I – Manual Cleaning

Manual procedure by means of physical action applied to the instrument's surface. You can use: soft-bristled brush and long cable, wire brush for drills, brush for cleaning lumen, sink with deep tub faucet with steerable jet, detergent and running water.

II – Mechanical Cleaning

Automated procedure by means of water jet washers or low frequency ultrasound, that operates under different conditions of time and temperature

DRYING

The instruments must be opened and dried with compressed air pistols with no oil or humidity, or they can be dried with paper towels and clean lint-free cloth.

VISUAL INSPECTION

This step verifies the efficiency of the cleaning process and the integrity conditions of the article. If necessary, proceed again to cleaning or replace the article. The deteriorated instruments or the ones that show corrosion indications must be separated and sent to re-wash.

STERILIZATION PACKAGE

For autoclave's sterilization, the strictly cleaned and dried material must be packed in packages made with material that allow the passage of steam. The most recommended is the surgical paper. During this step it's important to use chemical indicators to evaluate the presence of critical parameters of the steam sterilization: time, temperature and presence of steam. These tapes react chemically altering its color and should be placed inside each package before sterilization.

STERILIZATION

Sterilization is the process that aims to destroy or eliminate all microbial life forms through physical or chemical procedures. To ensure sterilization, it is essential that the steps already mentioned here are correctly followed. In an autoclave, the maximum temperature is 134-137°C, while in dry heat or hot air devices, the maximum temperature is 180°C.

STORAGE

Dry instruments thoroughly before storing them.

Earth Care Program & Reward

It is important that we pay attention to our environmental concerns and take action. There has never been a more critical time to protect our precious planet, particularly with so many goods being manufactured and processed without being properly recycled around the world. MA Dental is ecstatic to be a part of the Earth-Care project.

MA Dental's Earth Care Program is an environmentally friendly initiative that focuses on the recycling of dental instruments. The Earth Care program facilitates the environmentally friendly disposal of old and used dental instruments, regardless of brand, and provides new MA Dental instruments to dental professionals and businesses.

The Earth-Care program was established in 2018 with the goal of being environmentally conscious and reducing dental waste as much as possible. We carefully select the salvageable instruments sent to us through the Earth care program, recondition them, and distribute them to charities and donations in Europe that we support. Furthermore, if the instruments are worn out and cannot be reconditioned, we send them to our recyclers for proper disposal.

Please visit our website www.madental.dk to learn more about the policy, terms and conditions, and how it works.
